

Alexis Trejo

Software Engineer | Backend Engineer | Java • Go • Python

Mexico City, MX • marcoalexispt.02@gmail.com • alexis-trejo.com • alexis-trejo-079494298 • alexis-trejo-11

Profile

Software Engineer specializing in backend development, cloud-native applications, distributed systems, and software architecture. Experienced building complete software solutions from system design through deployment, monitoring, and maintenance using Java, Go, and Python.

Experience

Family Business, Forward Deployed Engineer – Mexico City, MX Jan 2023 – present

- Designed and developed internal software to digitize business operations.
- Evaluated operational processes to identify automation opportunities.
- Built inventory, employee, attendance, and operations management systems.
- Developed and deployed the company's public website.
- Managed infrastructure, deployments, and long-term maintenance.

Independent Client, Software Engineer – Remote Jan 2024 – present

- Designed and implemented an appointment management platform.
- Delivered a production-ready system tailored to real business workflows.
- Managed deployment, maintenance, and infrastructure.

Projects

Personal Portfolio Jan 2025 – present

Collection of backend and distributed systems projects showcasing software architecture, cloud infrastructure, DevOps, and modern backend engineering practices.

- Java Spring Boot applications.
- Go backend services.
- Python Django and FastAPI applications.
- Dockerized deployments.
- Automated CI/CD pipelines.
- AWS cloud deployments.
- Event-driven architectures using Apache Kafka.
- Monitoring with Grafana, Loki, and Prometheus.

Skills

Programming Languages: Java (Spring Boot), Go, Python (Django, FastAPI), TypeScript

Databases: PostgreSQL, MongoDB, Redis

Cloud: AWS (EC2, RDS, S3), Cloudflare Tunnel

DevOps: Docker, Docker Compose, GitHub Actions, CI/CD, GitHub Container Registry

Monitoring: Grafana, Loki, Prometheus

Messaging: Apache Kafka

Architecture: Modular Monoliths, Microservices, Event-Driven Architecture, REST APIs

Operating Systems: Linux (Fedora)

Networking: HTTP/HTTPS, TLS, DNS, Docker Networking, AWS Security Groups

Languages: Spanish (Native), English (Professional Working Proficiency)

Certifications

- INFOTEC — Introduction to Software Development

Additional Information

- Built and maintain a self-hosted Linux server for production deployments.
- Developed automated CI/CD pipelines using GitHub Actions.
- Deploy applications to AWS and self-hosted infrastructure.
- Developed a custom CLI for infrastructure management.
- Containerized all services using Docker.
- Maintain centralized monitoring with Grafana, Loki, and Prometheus.
